

GSTR 2001/2 - Goods and Services Tax: foreign exchange conversions

⚠ This cover sheet is provided for information only. It does not form part of *GSTR 2001/2 - Goods and Services Tax: foreign exchange conversions*

⚠ From 1 July 2015, the term 'Australia' is replaced in nearly all instances within the GST, Luxury Car Tax, and Wine Equalisation Tax legislation with the term 'indirect tax zone' by the *Treasury Legislation Amendment (Repeal Day) Act 2015*. The scope of the new term, however, remains the same as the now repealed definition of 'Australia' used in those Acts. This change was made for consistency of terminology across the tax legislation, with no change in policy or legal effect. For readability and other reasons, where the term 'Australia' is used in this document, it is referring to the 'indirect tax zone' as defined in subsection 195-1 of the GST Act.

⚠ This document has changed over time. This is a consolidated version of the ruling which was published on *4 October 2017*

! From 1 July 2015, the term 'Australia' is replaced in nearly all instances within the GST, Luxury Car Tax, and Wine Equalisation Tax legislation with the term 'indirect tax zone' by the *Treasury Legislation Amendment (Repeal Day) Act 2015*. The scope of the new term, however, remains the same as the now repealed definition of 'Australia' used in those Acts. This change was made for consistency of terminology across the tax legislation, with no change in policy or legal effect. For readability and other reasons, where the term 'Australia' is used in this document, it is referring to the 'indirect tax zone' as defined in subsection 195-1 of the GST Act.

Preamble

*This document was published prior to 1 July 2010 and was a public ruling for the purposes of former section 37 of the **Taxation Administration Act 1953** and former section 105-60 of Schedule 1 to the **Taxation Administration Act 1953**.*

*From 1 July 2010, this document is taken to be a public ruling under Division 358 of Schedule 1 to the **Taxation Administration Act 1953**.*

A public ruling is an expression of the Commissioner's opinion about the way in which a relevant provision applies, or would apply, to entities generally or to a class of entities in relation to a particular scheme or a class of schemes

If you rely on this ruling, the Commissioner must apply the law to you in the way set out in the ruling (unless the Commissioner is satisfied that the ruling is incorrect and disadvantages you, in which case the law may be applied to you in a way that is more favourable for you - provided the Commissioner is not prevented from doing so by a time limit imposed by the law). You will be protected from having to pay any underpaid tax, penalty or interest in respect of the matters covered by this ruling if it turns out that it does not correctly state how the relevant provision applies to you .

[Note: This is a consolidated version of this document. Refer to the Legal Database (<http://www.ato.gov.au/law>) to check its currency and to view the details of all changes.]

What this Ruling is about

1. This Ruling explains how to convert amounts of consideration that are expressed in foreign currency into Australian currency for GST purposes.
2. Section 9-85 of the *A New Tax System (Goods and Services Tax) Act 1999* (the GST Act) allows the Commissioner to determine the manner of working out the consideration in Australian currency where it has been expressed in a foreign currency. This Ruling discusses the *Goods and Services Tax: Foreign Currency Conversion Determination (No. 1) 2017* and how it can be used for the purposes of the GST Act.
3. The additional approved form requirements for tax invoices and adjustment notes where the consideration is expressed in a foreign currency are provided in the Ruling.
4. This Ruling examines how the manner stated in the Determination can apply to the price for a supply where the GST on the supply is 'reverse charged' and where the price is expressed in a foreign currency.
5. The Ruling provides a basis on which you can calculate your input tax credit entitlement where the consideration for a creditable acquisition is expressed in a foreign currency. The Commissioner acknowledges that there may be limited circumstances where the recipient cannot base their input tax credit on the GST payable in Australian currency. This Ruling explains how you calculate the input tax credit in these circumstances.
6. This Ruling also explains how you can calculate an amount of an adjustment for an adjustment event where the consideration for the supply is expressed in a foreign currency.
7. This Ruling does not apply to taxable importations.
8. Certain terms used in this Ruling are defined or explained in the **Definitions** section of this Ruling. These terms, when first mentioned elsewhere in the body of the Ruling, appear in **bold** type.
9. Unless otherwise stated, all legislative references in this Ruling are to the GST Act.

Date of effect

10. This Ruling applies both before and after its date of issue. However, this Ruling will not apply to taxpayers to the extent that it conflicts with the terms of a settlement of a dispute agreed to before the

date of issue of this Ruling (see paragraphs 75 and 76 of Taxation Ruling TR 2006/10).

10A. Changes made to this Ruling by Addenda that issued on 7 December 2011, 31 October 2012, 16 October 2013 and 4 October 2017 have been incorporated into this version of the Ruling.^{1A}

Background

11. There are many situations where entities make or receive supplies where the consideration is expressed in a foreign currency. Subsection 9-85(1) provides that the **value** of a taxable supply is to be expressed in Australian currency for the purposes of the GST Act. Subsection 9-85(2) allows the Commissioner to determine the manner in which consideration in a foreign currency is to be converted into Australian currency to work out the value of a taxable supply.

12. Section 9-70 provides that the GST payable for a taxable supply is 10% of the value. Therefore, where the GST payable is calculated from the value, the GST payable will always be expressed in Australian currency.

13. In some other provisions in the GST Act, the GST payable is calculated without reference to value. The Commissioner has recognised this and has developed rules that you can rely on to calculate the GST payable in Australian currency in these circumstances.

14. The Activity Statement (AS) includes the GST return in the approved form. One of the AS requirements is that all the amounts on the form are to be shown in Australian currency. The Commissioner considers the phrase 'shown in Australian currency' is akin to the phrase 'expressed in terms of Australian currency'. Accordingly, foreign currency must be converted to its equivalent in Australian currency.¹

15. This Ruling was first released as draft GSTR 2000/D15 and is significantly different from that Draft Ruling. It eliminates the administrative requirement of lodging nominations to the Commissioner.

^{1A} Refer to each Addendum to see how that Addendum amends this Ruling.

¹ *Payne v Deputy FCT [1936] 2 All ER 793 at 796.*

Ruling with explanation

The Commissioner's Determination

16. For the purpose of working out the value of a taxable supply, the Commissioner has determined the manner in which you work out the consideration in Australian currency.² A flowchart showing this manner is attached at Appendix 1.

17. The Commissioner allows you to use the manner stated in the Determination to convert an amount of foreign currency into Australian currency for other purposes of the GST Act. This manner can also be used in respect of GST-free and input taxed supplies, or where you do not use value to work out the GST payable.

18. The Determination does not apply to foreign currency conversions for taxable importations.

19. The Commissioner has determined that you can convert foreign currency into Australian currency by using the following formula:

$$\frac{\text{Consideration expressed in a foreign currency}}{1} \times \frac{1}{\text{your particular exchange rate on the conversion day}^3}$$

where,

- **your particular exchange rate** is the rate from the foreign exchange organisation you have chosen to use, the RBA rate or the agreed rate, whichever you have chosen; and
- the **conversion day** is the date that you use to convert your foreign currency into Australian currency for GST purposes.

Foreign exchange rates

20. The particular exchange rate that you choose may be an agreed rate or may come from one of the following sources:

- a foreign exchange organisation (for example, a commercial bank); or
- the Reserve Bank of Australia (RBA).

² Subsection 9-85(2) and *Goods and Services Tax: Foreign Currency Conversion Determination (No. 1) 2017*.

³ Conversion day is explained in paragraphs 27 to 36.

21. You can choose a particular exchange rate from the publicly available rates of a foreign exchange organisation. For example, an exchange rate can be:

- a 'buying', 'selling' or 'spot' rate from a commercial bank; or
- a rate under a **foreign exchange contract**; or
- a rate based on an averaging of a foreign currency exchange rate if your use of that rate conforms with the relevant accounting standard or you use that rate for income tax purposes.⁴

The RBA rate

22. The Reserve Bank of Australia rate (RBA rate)⁵ is the unit of foreign currency per \$A calculated by the RBA as the **4:00pm Australian Eastern time** rate on each business day. You can choose the RBA rate on your conversion day, or the RBA rate on the day prior to your conversion day.

Consistent use of exchange rate

23. Whichever foreign exchange rate you choose you should use it consistently for GST purposes. However, you can change your foreign exchange rate if you have sound commercial reasons for doing so. If you alternate between exchange rates with a view to reducing your GST liability, the Commissioner considers you are using your rate inconsistently. Therefore, you have not followed the manner stated in the Determination. In these circumstances, you may have understated your net amount for a tax period.⁶

The agreed rate

24. The agreed rate is the rate of exchange that you, as the supplier, have agreed with the recipient of the supply. This rate can be contained in either an implied or written agreement. It should reflect the rate of a particular foreign exchange organisation or the Reserve Bank of Australia. The agreed rate only applies for supplies made under the agreement and for the period of the agreement.

⁴ See Income Tax Ruling IT 2498.

⁵ [Omitted]

⁶ The general anti-avoidance provisions under Division 165 may apply.

25. Where the supplier and the recipient are associates⁷, the agreed rate should reflect a rate agreed to by parties dealing at arm's length.

26. Where the agreed rate does not apply, you need to select a relevant exchange rate as per paragraphs 20 to 23.

Conversion day

27. The conversion day is the date you use to convert your foreign currency into Australian currency for GST purposes. The exchange rate you use is a rate for that day from either the foreign exchange organisation you have chosen, the RBA or from your agreement.

28. The conversion days available to you depend on whether you:

- account for GST on a basis other than cash;
- account for GST on a cash basis;
- are a non-resident that makes inbound intangible consumer supplies; or
- are a non-resident that is a limited registration entity.

Conversion day - if you account for GST on a basis other than cash

29. When you account for GST on a basis other than cash, the conversion day is the first of:

- the day on which any of the consideration is received for the supply (the receipt date); or
- the transaction date / the invoice date (whichever you have chosen).

30. For each supply you have a choice between:

- the transaction date; or
- the issue date of the invoice (the invoice date).

31. The transaction date is the date you use for foreign currency conversion in your accounting system under the relevant Accounting Standard, for example, AASB1012: Foreign Currency Translation. The transaction date is provided as an option because of its close links to the foreign currency exchange translation used under accounting standards.

⁷ Defined in section 195-1.

Conversion day - if you account for GST on a cash basis

32. If you account for GST on a cash basis, you can choose one of the following as your conversion day:⁸

- the transaction date (see paragraph 31); or
- the invoice date; or
- the day on which any of the consideration is received for the supply (the receipt date).

Conversion day – if you are a non-resident that makes an inbound intangible consumer supply

32A. If you are a non-resident that is not a limited registration entity, and you are making inbound intangible consumer supplies, your conversion day is:

- a day specified in either paragraphs 29 or 32 of this Ruling for any types of supplies that you make (including inbound intangible consumer supplies); or
- for your inbound intangible consumer supplies only, the final day of the relevant tax period in which GST is payable (in which case, the conversion day for your other types of supplies is the day specified in either paragraphs 29 or 32 of this Ruling).

Conversion day - if you are non-resident that is a limited registration entity

32B. If you are a non-resident that is a limited registration entity, your conversion day is:

- a day specified in either paragraphs 29 or 32 of this Ruling; or
- the final day of the relevant tax period in which GST is payable on your supplies.

Periodic or progressive supplies

33. If a supply is made:

- for a period or on a progressive basis; and

⁸ *Goods and Services Tax: Foreign Currency Conversion Determination (No. 1) 2017* requires that the amount is worked out according to the conversion day.

- for consideration that is to be provided on a progressive or periodic basis;

then the conversion days are worked out as if each progressive or periodic component of the supply were a separate supply.⁹

Where total consideration is unknown at time of supply

34. The Commissioner has determined a particular attribution rule where a supply occurs before the total consideration is known.¹⁰ This may cause the supplier to have a different conversion day in respect of each amount of the consideration. The rules established in paragraphs 27 to 33 are used to determine the conversion day for each amount of the consideration.

Example 1 - where total consideration is unknown at time of supply

35. TSG Co accounts for GST on a basis other than cash and makes a taxable supply of coal for which it issues an invoice for the interim payment of \$US110,000 on 12 August 2000. The final price will be determined when the exact weight is confirmed and an analysis is completed.¹¹ Two months later, when the final weight and analysis is known, a total price of \$US187,000 is confirmed. TSG Co then issues another invoice for \$US77,000 on 20 October 2000, being the balance of the total price.

36. TSG Co receives no payment prior to each invoice issuing. It applies the exchange rates for 12 August and 20 October 2000 from their foreign exchange organisation, to convert the amounts of \$US110,000 and \$US77,000 respectively to Australian currency.

Reverse charges

37. A supply of anything other than goods or real property that is not connected with Australia can be a taxable supply.¹² In this circumstance, a 'reverse charge' applies. Also, the GST on taxable supplies made by non-residents can, with the agreement of the recipient, be 'reverse charged' to the recipient.¹³ In both circumstances, the GST on such taxable supplies is payable by the recipient of the supply and not payable by the supplier. The amount of GST on a supply where the

⁹ See Division 156 and Goods and Services Tax Ruling GSTR 2000/35.

¹⁰ See paragraphs 92 to 96 of Goods and Services Tax Ruling GSTR2000/29.

¹¹ You must comply with the Commissioner's determination contained in Goods and Services Tax Ruling GSTR 2000/29.

¹² Division 84

¹³ Division 83

GST is reverse charged to the recipient is 10% of the price of the supply.¹⁴

38. The Determination applies when you are working out the value of a taxable supply. Divisions 83 and 84 do not require you to work out value to determine the GST payable.

39. Although the Determination does not have direct effect for conversions of foreign currency in relation to reverse charge situations, the Commissioner still requires you to express your GST payable in Australian currency.¹⁵ The manner stated in the Determination can be used for this purpose.

40. The same rules apply in relation to deciding the foreign exchange rate and the conversion day you use. See paragraphs 20 to 26 for foreign exchange rate and paragraphs 27 to 36 for the conversion day.

Tax invoices and adjustment notes

Tax invoices

41. There are specific tax invoice requirements set out in subsection 29-70(1) where a supplier makes a taxable supply. One of those requirements is that the document provides enough information to enable the GST payable to be ascertained. If the value of the taxable supply is expressed in a foreign currency, the requirement for the amount of GST payable to be clearly ascertained will be satisfied where the tax invoice:

- includes the GST payable in Australian currency; or
- includes the GST payable in foreign currency and provides sufficient information to the recipient to work out the GST payable on the supply in Australian currency.

Sufficient information

42. For there to be sufficient information, the supplier is required to provide the recipient with the information necessary to work out the GST payable on the supply in Australian currency. Examples of sufficient information include:

- the price expressed in Australian currency; or

¹⁴ Sections 84-12 or 83-20 as appropriate.

¹⁵ It is an approved form requirement for your AS that all amounts are shown in Australian currency.

¹⁶[Omitted.]

- the value expressed in Australian currency; or
- the GST payable, price or value expressed in a foreign currency and the conversion rate used by the supplier, or a statement, to work out the GST payable in Australian currency.

43. An example of a statement with sufficient information is as follows:

‘The GST is calculated in Australian currency at the exchange rate published by the RBA at 4.00pm Australian Eastern Time on the business day prior to the date of this tax invoice.’

Adjustment Notes

44. Where a supplier has an adjustment that arises from an adjustment event in respect of a taxable supply and the consideration is expressed in a foreign currency, the supplier is required to provide similar additional information to that contained in paragraphs 42 and 43 on the adjustment note. That is, the adjustment note should contain enough information to enable the recipient to work out the change in GST payable in Australian currency.¹⁷

Transitional concession

45. [Omitted.]

46. [Omitted.]

Claiming input tax credits

47. Section 11-25 states:

‘The amount of the input tax credit for a creditable acquisition is an amount equal to the GST payable on the supply of the thing acquired. However, the amount of the input tax credit is reduced if the acquisition is only partly creditable.’

The amount of input tax credit for a creditable acquisition is to be expressed in Australian currency.¹⁸

¹⁷ An explanation of the requirements for adjustment notes can be found in Goods and Services Tax Ruling GSTR 2013/2 *Goods and services tax: adjustment notes*.

¹⁸ It is an approved form requirement for your AS that all amounts are shown in Australian currency.

48. Where the consideration for an acquisition is expressed in foreign currency the tax invoice will include:

- the GST payable in Australian currency; or
- sufficient information to allow the recipient to work out the GST payable in Australian currency.^{18A}

You can use this amount of GST payable to calculate your input tax credit in Australian currency.

Special circumstances

49. There may be limited circumstances where a recipient is not able to use the information from the tax invoice as the basis of its claim for input tax credits. For example, a recipient's computer system is set up in such a way that the GST payable or conversion information from the tax invoice is not recorded, but rather the system calculates the amount of credit from the price paid for the supply.

50. In such circumstances, the recipient can make a reasonable estimation of the input tax credit in Australian currency. The method the recipient uses to make the estimation should reflect a relevant exchange rate on the conversion day in its calculations.

51. The recipient can use the manner stated in the Determination as a method of reasonably estimating the input tax credit in Australian currency. The rules apply in relation to deciding the foreign exchange rate and the conversion day you use. See paragraphs 20 to 26 for foreign exchange rate and paragraphs 27 to 36 for the conversion day.

52. Another circumstance where the manner stated in the Determination can be used to reasonably estimate the input tax credit is where the recipient is unable to obtain a tax invoice from the supplier despite reasonable attempts to do so. An example of this could be where the supplier has ceased business and reasonable attempts by the recipient to obtain the tax invoice have failed.¹⁹

53. Where an entity uses a commercial exchange rate or the RBA rate to work out its GST payable in Australian currency it should use that same rate to work out its input tax credit, where necessary.

^{18A} As stated in paragraph 41 of this Ruling, this information satisfies the requirement that the amount of GST payable in relation to each supply on the document can be clearly ascertained.

¹⁹ Subsection 29-70(1B) provides that the Commissioner may treat a document as a tax invoice that does not satisfy the requirements of subsection 29-70(1). Such a request by a recipient to which the Commissioner agrees is notification of the recipient's entitlement to the relevant input tax credit.

Adjustments

54. It is a requirement that all amounts shown on your AS are expressed in Australian currency. Therefore, the amount of any adjustment is to be expressed in Australian currency.

Adjustment events

55. Where an adjustment event occurs in relation to a supply or acquisition, an adjustment to your net amount may arise because of that event. To work out if an adjustment does arise because of an adjustment event you must apply Division 19.²⁰

56. Broadly, Division 19 requires you to compare two amounts to determine whether or not an adjustment arises because of the adjustment event. For adjustment events in relation to a supply, you must work out and compare the previously attributed GST amount and the corrected GST amount. The difference between these two amounts is the amount of the adjustment arising from the adjustment event in relation to the supply.

57. For adjustment events in relation to an acquisition, you must work out and compare the previously attributed input tax credit amount and the corrected input tax credit amount. The difference between these two amounts is the amount of the adjustment arising from the adjustment event in relation to the acquisition.

Exchange rate for adjustment events relating to supplies

58. For most supplies, the previously attributed GST amount is the amount of the GST attributable to a tax period in respect of the supply.²¹ Therefore, you already have the information in Australian currency.

59. The corrected GST amount is 1/11 of the consideration for most supplies, taking into account the adjustment event.²² You need to convert that amount into Australian currency to compare it with the previously attributed GST amount in order to work out the amount of the adjustment.

²⁰ The Commissioner's views on the operation of Division 19 are contained in GSTR 2000/19.

²¹ You may need to take into account other adjustments (if any) that were attributable to earlier tax periods – refer to paragraphs (b) and (c) of section 19-45.

²² You may need to take into account other circumstances (if any) that gave rise to adjustments attributable to earlier tax periods – refer to paragraph (c) of section 19-40.

60. The exchange rate you should use for this conversion is the rate (where available) you used when you worked out the GST payable for the supply (the original conversion day).

Alternative exchange rate where rate on original conversion day is unavailable

61. In some situations, it may not be possible for a supplier to calculate the corrected GST amount or the previously attributed GST amount based on the foreign exchange rate of the original conversion day. An example of this is where an adjustment event occurs and your records have been destroyed and the exchange rate is not available from your foreign exchange organisation. In these circumstances, you may use the particular exchange rate from your foreign exchange organisation on the issue date of your adjustment note.

Exchange rate for adjustment events relating to acquisitions

62. For most acquisitions, the previously attributed input tax credit amount is the amount of the input tax credit attributable to a tax period in respect of the acquisition.²³ Therefore, you already have the information in Australian currency.

63. The corrected input tax credit amount is 1/11 of the consideration for most acquisitions, taking into account the adjustment event.²⁴ You need the amount in Australian currency to compare it with the previously attributed input tax credit amount to work out the amount of the adjustment.

64. You may use the information from the adjustment note to work out the amount of the adjustment in Australian currency. You can also use the information on the original tax invoice for this purpose.

65. Where you cannot use the information on the adjustment note or tax invoice, you may make a reasonable estimate of the amount of the adjustment in Australian currency. You can use any method outlined in this Ruling as a reasonable estimate.

²³ You may need to take into account other adjustments (if any) that were attributable to earlier tax periods - refer paragraphs (b) and (c) of section 19-75.

²⁴ You may need to take into account other circumstances (if any) that gave rise to adjustments attributable to earlier tax periods - refer paragraph (c) of section 19-70.

Bad debts

66. Division 21 allows a supplier to make adjustments where a debt in respect of a taxable supply is written off as bad, or is overdue for 12 months or more²⁵. The amount of the adjustment is 1/11 of the amount written off or overdue for 12 months or more.²⁶ Where the consideration in respect of the supply is expressed in a foreign currency, the supplier needs a method to convert the adjustment into Australian currency.

67. In working out the adjustment for a bad debt, the supplier may use the foreign exchange rate that they used to work out the GST payable on the supply.

68. Similarly, a recipient has an adjustment where the supplier writes off as bad the whole or part of the consideration, or a debt is overdue for 12 months or more. The amount of the adjustment is 1/11 of the amount written off, or overdue for 12 months or more. Where the consideration in respect of the acquisition is expressed in a foreign currency, the recipient needs a method to convert the adjustment into Australian currency. If the recipient is aware of the foreign exchange rate used by the supplier to work out the GST payable, they should use that rate.

69. Where the recipient is not aware of that rate, the recipient can use a reasonable estimation of the amount of the adjustment. For example, the recipient can use the same proportion of the input tax credit claimed as the amount of the consideration written off, or outstanding for 12 months or more. Where 50% of the consideration remains unpaid for 12 months or more, a reasonable estimation of the amount of the adjustment is 50% of the input tax credit claimed.

Value of a taxable supply - alternative view

70. A view has been expressed that where the price under section 9-75 is expressed in a foreign currency, the value under section 9-75 and, subsequently, the GST payable under section 9-70 is able to be calculated in a foreign currency.

²⁵ The Commissioner has issued a Ruling on how you calculate an adjustment for bad debts. See Goods and Services Tax Ruling GSTR 2000/2.

²⁶ Division 136 applies where the bad debt relates to a partly taxable or partly creditable transaction.

71. This view draws on the following analysis. Subparagraph 29-70(1)(c)(iii) states that a tax invoice include enough information to clearly ascertain the price of what is supplied. According to section 9-75, the price is the sum of:

- the consideration as expressed as an amount of money; and
- the GST inclusive market value of any consideration not expressed as an amount of money.

72. The word ‘money’ is defined in section 195-1 to include currency whether of Australia or any other country. Therefore, value determined under section 9-75 can be calculated in foreign currency. Further, section 9-85 converts value or consideration into Australian currency. It does not permit a direct conversion of price.

73. The Commissioner considers the better view is that through the interaction between sections 9-75 and 9-85 the price is expressed in Australian currency by converting consideration into Australian currency. Under the basic rules, the value of a taxable supply is worked out under section 9-75. The value is calculated as 10/11 of the price.

74. In working out the value where the consideration is expressed as an amount of money in foreign currency, subsection 9-85(2) applies. The consideration is to be treated as an amount of Australian currency worked out in the manner stated in the Commissioner’s Determination.

75. As both price and value are derived from consideration, once the consideration is worked out in Australian currency, the price and the value will also be in Australian currency.

Input tax credit amounts – alternative view

76. A view has been expressed that, under section 11-25, the input tax credit for a creditable acquisition in Australian currency does not have to equal the GST payable in Australian currency. Under this view, where entities transact in a foreign currency, section 11-25 merely requires the input tax credit in the foreign currency to equal the GST payable in that foreign currency.

77. The Commissioner considers the better view is that the input tax credit is equal to the GST payable in Australian currency. As explained in paragraphs 11 and 12, the value of a taxable supply will be calculated in Australian currency where the consideration is expressed in a foreign currency. This is because the consideration is to be treated as an amount of Australian currency worked out in the manner determined by the Commissioner. The GST payable will be 10% of the value, which will be in Australian currency. Section 11-25 states that the amount of input tax credit is equal to the amount of GST payable. As the GST payable is calculated in Australian currency, the input tax credit will equal the GST payable in Australian currency.

78. However, the Commissioner recognises that there will be special circumstances where the recipient is constrained from using the tax invoice information to calculate their input tax credit in Australian currency. In these circumstances, the recipient may calculate their input tax credit as explained in paragraphs 49 to 53 of this Ruling. In this situation, the input tax credit may not equal the GST payable in Australian currency.

Definitions

79. The following terms are defined for the purposes of this Ruling:

4:00pm Australian Eastern time

80. 4:00pm Australian Eastern time means 4:00pm Australian Eastern Standard time or 4:00pm Australian Eastern Summer time, as appropriate.

Value

81. For the purposes of this Ruling, the 'value' of a taxable supply has the meaning given by sections 9-75, 9-80, 72-10, 72-70, 78-5, 78-60, 78-95, 87-10, 90-10, 96-10 and 108-5 of the GST Act.

Foreign exchange contract

82. A foreign exchange contract is a contract between two parties, for example, between a financial institution and the entity, to deliver or receive a currency against another currency at a given date in the future, at the agreed exchange rate between the financial institution and the entity.
